My Respiratory System Notes

- Respiration is ____________.
- Breathing delivers ____________ and to take ____________ away.
- Breathing begins with the ____________, a dome-shaped muscle at the bottom of the lungs.
- When you inhale, the diaphragm ____________, flattening out and pulling downward. It enlarges the space the _____ are in, pulling in air.
- When you exhale, the diaphragm ____________, reducing the space and pushing air out.
- The _____ are the main organs of the Respiratory System.
- In the lungs, _______ is taken into the body and _________ is breathed out.
- _________________ pick up oxygen in the lungs, carry it around to all the body parts, pick up carbon dioxide and bring it back to the lungs where we breathe it out.
- __________, or the windpipe, filters the air we breathe to the main stem bronchi.
- The ____________, are two large tubes that carry are directly to the lungs. One goes into the _____ and the other goes into the _________.
- _________________ are the tiniest tubes that branch off the bronchi. There are _________ in each lung and are about as thick as a hair.
- Clumps of tiny air sacs at the end of each bronchiole are ________________.
